Finding the Right Stove

We will help you to find the right stove for your particular needs, but there are a number of things that only you can tell us that will make that easier. Help us to help you and have a look at these simple notes to assist you in providing us with the information we will need when we talk with you. Please feel free to print out this page, you could bring it with you when you come to the showroom or have it handy when you call us.

Which of these do you want your stove to provide?	✓
Focal point in a room	
Heating in one room	
Heating for radiators around the house	
Hot water	
Cooking facilities	

What kind of fuel do you want to burn?	✓
Any	
Only wood	
Only coal or coke	

Standalone stove: How big is the room that you want to heat?

The bigger the space, the larger the capacity stove you will need. On the other hand, a stove that is too big for the room it's in will be wasteful so it's very important that we know what size space you want to heat if we are to advise you properly.

Before contacting us or visiting the showroom it really helps if you can do some simple measuring of the space to be heated so that you can give us its:

Height	Length	Width

If you also want to run radiators:

How many radiators do you want your stove to heat?	
Will you fit these yourself or will you need a plumber?	

Does the building you are heating have?	✓
Double glazing	
Loft insulation	
Wall insulation	

Thanks. We look forward to talking with you,

Phil, Owen & Lewys Walters
